My Works in Tower Of Fantasy

Work Project in Company UE4

Website：https://giselleli.framer.wiki/workproj/tof

Video：https://www.youtube.com/watch?v=M6h2-ChHi1I

From 2024 to 2025, I worked as a Level Designer at Tower of Fantasy, where I was responsible for a wealth of gameplay design, visual presentation design and technical implementation. I was mainly involved in the development of Version 5.0, and created a variety of small and large gameplay modes themed on the universe.

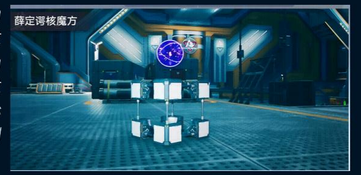
Open World Puzzle Gameplays

Minigames I designed and implemented

Gameplay Video: https://www.youtube.com/watch?v=M6h2-ChHi1I

The world of Version 5.0 is named "Kailo". According to the setting, players need to find a kind of "Mimic" and extract its core energy. Based on this setting, I designed the "Quantum" Rubik's Cube and the "Displacement" Rubik's Cube through color modification.

This cube features a quantum lock mechanism similar to that of the Weeping Angels. When not under the player's gaze, it begins to move and teleports randomly onto any physical object.



The core of the "Displaced Mimic" is in the air at the very beginning and is extremely heavy. Players can move it back by activating the "Lunar Gravity" device.

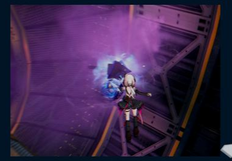
After lunar gravity is activated, the player's gravity is drastically reduced, entering Lunar State 3C, and physical feedback is triggered upon collision with surrounding objects.

I use radial blur and posterization post-processing effects to visualize gravity shifts.

NPC Mini Games

Zero-Gravity Zone

A derelict zero-gravity zone exists aboard a spaceship, where numerous workers are trapped. Upon entering the zone, the player will enter Zero-Gravity State 3C.



Magnetic Attractor: *In the zero-gravity zone, this is the only device the player can use for movement.*

When the player approaches a trapped NPC, they can interact to ***connect to their lifeline****, then leverage the physics of the zero-gravity zone to pull them along.*

Body without a soul: *Heavy, immobile, can be destroyed.*

Batesian Bugs

Some anthropomorphic bugs blend in with the NPCs. A close look reveals their absurdly comical deformities. When players spot them and interact to talk with them, the bugs will revert to their original form.

The bizarre appearances of these NPCs are all modified using the UE Animation System.

Batesian Bugs

Stand by the police, try to spot the keywords uttered by passing NPCs and arrest them with a shooting motion.

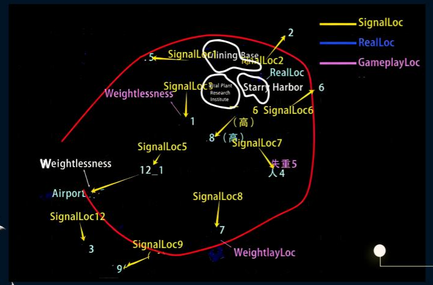
Gameplay System Design

Signal Scanner Gameplay

Gameplay Video: https://www.youtube.com/watch?v=04DrZZts0ZA

In Kailo, players can open their signal Scanner to search if there's special sites, missing people, or misterious treasures...

Background: 5.0 Vast Vertical Space Map+ Short Draw Distance = Difficulty in Locating POIs
—> Our team placed most gameplay elements and POIs near the main asteroid belt.
—> My responsibility was to use off-the-beaten-path areas to create side missions.

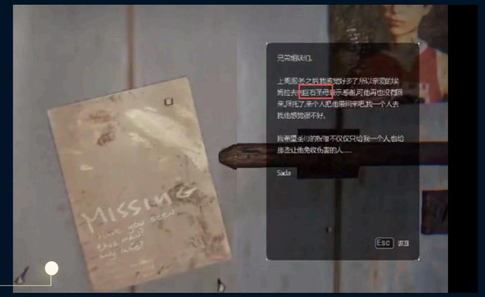


Simultaneously, I needed to guide players to locate mission destinations with relative precision. To achieve this, a scanner system was designed, which further extended into two gameplay features: finding missing persons and treasure maps.

Reference: Outer Wilds, No Man's Sky,Starfield...

I've been contemplating how the cosmic-themed games drive player exploration. They seem to employ an instrument that maintains a connection with every corner of the world, yet its effectiveness hinges on careful observation and a degree of luck.

I have deeply considered integrating the exploration-driven missing persons missions from Dying Light with the fragmented storytelling approach of Dark Souls. This design allows players to efficiently uncover and piece together a complete backstory while exploring the world.

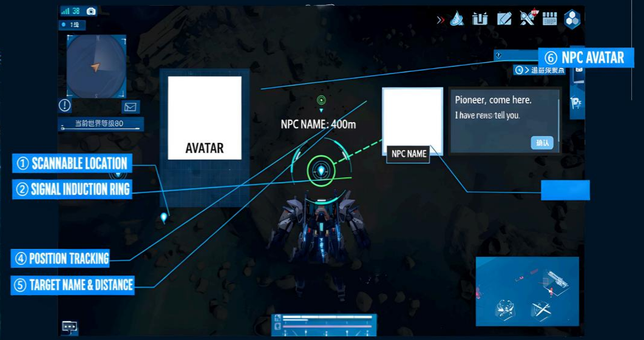


That's how I designed this system...

1. ***Signal towers*** *are scattered across the map and capable of emitting signals. When the player activates the scanner, the scanner interface is triggered, displaying icons of signal towers emitting signals within a 1km radius for the player to track.*

2. *Special* ***Unknown Signal Towers*** *do not show their icons directly; their location and tracking require the induction ring on the main interface.*

3. *When the player* ***aims at an active signal tower****, they can obtain signal information*



Gameplay System Design

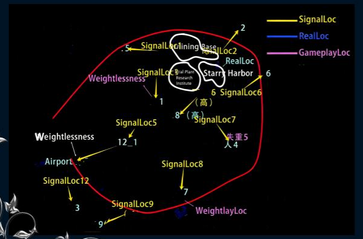
Finding Missing People Gameplay

Gameplay Video: https://www.youtube.com/watch?v=04DrZZts0ZA

Players can find three Missing Persons Archives in three urban districts.
→ Open the panel to check the missing person's last-seen district.
→ Tap Record to save the info to the scanner. Go to the district, activate the scanner to find last sighting A, then head there.
→ At A, reactivate the scanner to track the Unknown Signal Tower toward the actual location B.
→ Reach B and trigger an event (dialogue rescue, monster battle rescue, corpse discovery – increasing in complexity).
→ Return to the Archive, tap the photo to claim rewards.

Level Design Of Finding Missing People

Sorted by Event Type: Minimize repetitive gameplay; Intersperse several event types across 3 panels.
Sorted by Difficulty of Discovery: Establish difficulty gradients based on proximity to critical paths, distinctness of elevation changes and event complexity. The lowest difficulty is assigned to the Novice Village panel.
Sorted by Narrative: The farther a missing person is from the main path, the higher their chance of death.



NPC Type	Quantit	NPC Performance	Completion Method
Normal Lost	4	Spawn NPC	Talk to the NPC who offers a way back. Complete.
Monster Encounter	3	Black Screen -> Spawn scared NPC + spawn enemies (Pirates/Bugs) around	Eliminate all spawned enemies. Complete.
Deceased	4	Spawn NPC in a lying down pose, some with a readable datapad nearby	Interact with the NPC corpse. Complete.
Special Quest	1	Requires sequential interaction with multiple items. Spawn the first interactable item.	Interact in sequence, e.g., first investigate Datapad A, then inquire with another NPC, then find and interact with the missing NPC.

Example Story Of Finding Missing People

Record the info, then locate Jerry's signal point. Reach the signal tower and find it's a mutated Batesian Bug.

Locate an unknown signal point nearby.

Arrive there to discover Jerry's body and his final message, learning he has a daughter.
You can later talk to his daughter to trigger more story content.

Finding Secret Treasures

Gameplay Video: https://www.youtube.com/watch?v=WsN8uDmADYQ

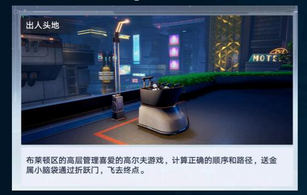
*→ Get **pirate treasure map** location & password from NPC; minimap marks the spot, scanner logs the map's signal.*
*→ Near the target: **thick fog + strange meteorites spawn**; activate scanner to locate the treasure spot.*
*→ Reach the treasure spot's signal tower → **prompt: numerous unknown signals nearby.***
*→ Scan to find 4 unknown signals with different **password messages** each.*
→ Dig at the wrong password → teleported to wormhole (penalty).
→ Dig at the NPC's password → claim reward.

Other Mini Games I Designed

Minigames I designed and implemented

During my time working on Tower of Fantasy, I also designed a number of other mini-games, which were widely praised by players both at home and abroad.

Bot Head Golf



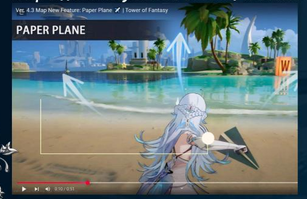
A golf game loved by Brighton District (rich part) executives: calculate the correct sequence and path to send the metal noggin through the portal and fly to the finish line.

Illusory Bubble

If you dream of getting rich overnight, or find the burden of common prosperity too heavy and crave excitement instead.

Paper Plane

https://www.youtube.com/watch?v=LbXMCyPJ8NY



When the player throws the plane, they can view the scenery along the plane's path in first-person perspective.

Phantom Beat

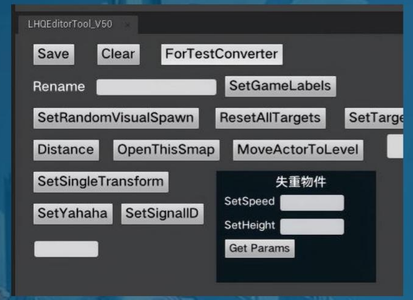
https://www.youtube.com/watch?v=mIEa2wznzYA

Express yourself on the dance floor, follow Lana's phantom figure, and dance together to the rhythm and beat.

Random NPC Tools

Experience and Gameplay

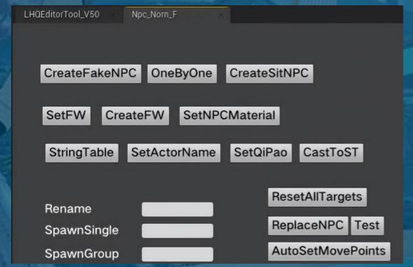
During the Tower of Fantasy project, to improve the configuration efficiency of open-world levels, I independently used UE tool control blueprints to create some tool buttons that facilitate enhancing the open-world mass placement efficiency.

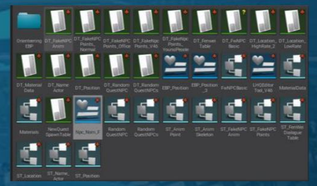


- ***One-Click Random Spawn Generation Tool：*** *Uniformly distributed Targets within an area or generated them procedurally from scene models and logic, then batch-assigned to spawners.*
- ***Configuration Table Export Tool：*** *Batch-exported setup data to tables for streamlined testing.*
- ***One-Click-to-Load Specific Level Layers Tool：*** *Dragging an Actor auto-loaded the corresponding streaming level at those coordinates and set it active.*

(These tools were developed by me personally, but certain shared nodes have been obscured in presentation.)

Story background





Procedural dummy NPC generation: Batch-generated NPC instances with variations in position, model, and animation based on data tables, supporting batch material replacement for color variation and sequential assignment of movement targets.

This system utilizes multiple configurable Data Tables, allowing designers to flexibly modify parameters such as NPC types spawnable in specific areas and required mood-based animations.
